

Alma Lake - Deep Hole 2010 Results

Alma Lake - Deep Hole was sampled **7** different days during the 2010 season. Parameters sampled included:

- water clarity
- temperature
- dissolved oxygen
- total phosphorus
- chlorophyll

The average summer (July-Aug) secchi disk reading for Alma Lake - Deep Hole (Vilas County, WBIC: 967900) was 9.48 feet. The average for the Northeast Georegion was 9.4 feet. Typically the summer (July-Aug) water was reported as **CLEAR** and **BLUE**.

Chemistry data was collected on Alma Lake - Deep Hole. The average summer Chlorophyll was 4.8 µg/l (compared to a Northeast Georegion summer average of 14.4 µg/l). The summer Total Phosphorus average was 13.3 µg/l. Lakes that have more than 20 µg/l and impoundments that have more than 30 µg/l of total phosphorus may experience noticeable algae blooms.

The overall Trophic State Index (based on chlorophyll) for Alma Lake - Deep Hole was 47. The TSI suggests that Alma Lake - Deep Hole was **mesotrophic**. Mesotrophic lakes are characterized by moderately clear water, but have an increasing chance of low dissolved oxygen in deep water during the summer.
